

ABSTRACT OF THE DISCLOSURE

5 An attachable breast form enhancement system comprising a
pair of breast forms adjoined by a connector. The breast
forms have an interior surface with a pressure sensitive
adhesive layer that adjoins to the user's breasts. The
pressure sensitive adhesive layer can be a permanently grown
pressure sensitive adhesive that has an adhesion force to the
10 breast forms that is greater than a cohesion force to the
user's breasts. The connector adjoins the separated breast
forms by attaching to the inner sides of the breast forms and
pulling the user's breasts together. The connector can be
either permanently or removably attached to the breast forms.
15 Several different configurations of breast forms and
connectors are available to achieve the benefits of the
present breast form system. The improved breast form system
allows a user to eliminate use of traditional bras by simply
adhering the pair of breast forms to the user's breasts/skin,
20 and then adjoining the breast forms with the connector. The
breast form system provides for enhancement of breast size and
shape, as well as provides for customization of breast
cleavage and push-up enhancement.
